## PRODUCT INFORMATION SHEET

The 21mm, 15 ply, WISA-Trans Plywood used for the platform is fully imported from Finland and is a multilayer laminated plywood panel with a slip resistant pattern. (Please see product information and compliance certifications attached)

The Industrial Duty Swivel Castors used on the platform is made of pressed steel, electro plated and equipped with double ball bearings. The polypropylene wheel is fitted with a non-marking thermoplastic rubber tread. Each wheel is load tested to withstand the stated weight. (Please see compliance certifications attached)

### DELIVERY:

Items are Ex-Stock, subject to prior sales and on receipt of your official order.

In case of no stock, 7 to 10 working days, excluding delivery times.

Delivery is FOB (Free on Board) Gauteng Area.

If you are situated outside this area, then Standard Courier Rates will be charged, depending on the end destination.

### SPECIAL NOTES:

Special care should be taken to ensure maximum life expectancy of the product:

- Always ensure that the product is used for its intended purpose
- Product should only be used on a smooth, clean surface free from any metal shavings and any harmful substances.
- Overloading should be avoided and the maximum, dynamic load stated should be adhered to.
- Any weight placed onto the trolley should be placed on the centre of the trolley for even weight distribution.
- No shock-loading should be avoided as this will place huge stress on the castor wheels and deform or break the laminated platform.

### • VERY IMPORTANT NOTICE:

- A magnet is being used to hold the Arm and Handle in place in the “fold up” position. Magnets may cause serious risk for patients with Pacemakers and Implantable Cardioverter Defibrillators.
- Bank Cards should also be kept away from the magnets as direct contact will scramble the magnetic strip.
